

WEBINAR

CONTROL SYSTEM CONFIGURATION

Join SMC as we explore solutions to help you design and develop your industrial control system. We'll discuss a variety of configuration tools that include sample code, CAD drawings, and system architectures that help you determine what size system you might need to build.

- **ProposalWorks** allows you to select standard products or configure made-to-order products to meet more precise application requirements. You can access product data such as lifecycle status, certifications, pricing, and more to help support decision making.
- **Integrated Architecture Builder (IAB)** software provides advanced selection assistance and a graphical interface for designing systems. Those systems can include products communicating over networks like Ethernet/IP and subsystems with components sharing a backplane like PLCs.

AGENDA

- **ProposalWorks Demo**
 - Part number configuration
 - Part number documentation
 - Part number BOM generation
 - CrossWorks
 - Project planning
 - Budgeting
 - Lead time
- **IAB Demo**
 - IAB Overview
 - Project creation
 - Migration wizards
 - Labs

DETAILS

February 29, 2024

11:30 AM - 1:00 PM

Virtual Webinar

FREE (a \$500 value!)

All attendees will receive a \$25 Uber Eats gift card to enjoy lunch on SMC.
