

FALL PROTECTION

Are your workers safe at height?

Every day, thousands of people around the world go to work and perform tasks at heights most would never dream of climbing to - a dangerous calling that results in thousands of injuries each year.

Whether you're reaching for the sky or crawling into tight confined spaces, our commitment to you remains the same: providing you with quality, comfortable protection and valuable training to help you get home safely.

Fall Protection Portfolio:

- Anchors
- Body Harnesses
- Connecting Devices
- Descent and Rescue
- Fall Protection for Tools
- Confined Space
- Engineered Systems

With over 20,000 products designed for the specific needs of every industry with at-height hazards, we can find the just-right combination of anchorages, body support, and connector solutions to meet the requirements of virtually any application.

Fall Protection Training

This training enables employees to recognize the hazards of falling and shall train each employee in the procedures to be followed in order to minimize these hazards.

This on-site class fulfills OSHA requirements and trains anyone working from a height greater than four (4) feet on fall protection basics.

SAFETY

HOW IT WORKS

1. Fall Protection Inspection

To ensure the equipment works efficiently and is in excellent condition, you must have your fall protection equipment inspected annually.

2. Fall Clearance Calculator

Should a fall occur, there must be sufficient clearance below the user to arrest the fall before the striking the ground or any other object.

3. Summary of Findings

A comprehensive fall protection plan, including recommendations for maintaining compliance, is provided.
