SMC
OUR KNOWLEDGE IS YOUR POWER

INDUSTRIAL DATA CENTER

Your manageable gateway to virtualization.

Virtualization has become widely adopted as a standard in the information technology industry and is now becoming a growing trend in the manufacturing and production industries. By adopting virtualization today, you can discover such benefits as:

- Reduced server footprint
- Extended application longevity
- Improved infrastructure reliability with management and recovery features
- Ease of licensing and warranty management with Remote Monitoring and Administration

All of these benefits boil down to cost savings for your business, so isn't it time for virtualization?

The Industrial Data Center from SMC can help your business realize these cost savings through a pre-engineered, scalable infrastructure offering. All of the hardware you need to run multiple operating systems and multiple applications off of virtualized servers are included in the cost.

As a pre-engineered solution, the Industrial Data Center is designed to ease the transition to a virtualized environment for your business, saving you time and money. Instead of ordering five different pieces of equipment with five purchase orders, in addition to hiring the correct certified installation professionals to get you up and running, the Industrial Data Center combines equipment from industry leaders that are pre-configured specifically for the manufacturing and production industries. All equipment is pre-assembled and an SMC Specialist will come to your site and commission the system.

FEATURES AND BENEFITS:

One Number for Technical Support

- Includes TechConnect support so you have one phone number to call. Additional support levels include 24x7 support and remote monitoring and administration.

Reduced Cost of Ownership

- Decrease the server footprint in your facility and realize savings over the lifetime of your assets

Uptime Reliability

- Delivers high availability and fault tolerance
- Delivers quick deployment and replacement

Designed for Your Industry

- Engineered specifically for use in production and manufacturing environments
- Response time of less than 3 minutes with Remote Monitoring and Administration

Ease of Ordering and Commissioning

- Turnkey solution that includes configuration service; no need to place multiple equipment orders
